

RECOMMENDATIONS FOR PAPERLESS DRE VOTING MACHINES:

Poll Judges or Election Supervisors

- 1) Refuse no one, who remotely may be a legitimate voter, the right to vote. Use provisional ballots.
- 2) Be prepared. Know what to do if a DRE voting machine malfunctions or breaks down. Report all DRE problems. Have a paper ballot option.
- 3) Voters with language, visual impairments, or literacy difficulty that are not addressed by current DRE technology should be allowed to choose who assists them in voting.
- 4) At your poll location, write down the serial number, make, and model of each voting machine, include any information about the software that is visible when you start or calibrate the machine, and its working condition, and document any changes in this status.
- 5) Know who is working at your polling location.
- 6) Provide sufficient privacy space for voting stations.
- 7) Make sure that poll observers and workers are present with you to verify that each voting machine's physical tamper detection measures have not been disturbed. Immediately report any problems.
- 8) Make sure you and all poll workers receive at the minimum 3 hours of training.
- 9) Know how to check the calibration of a DRE voting machine and to recalibrate the machine if necessary.
- 10) Have a camera with you on Election Day, to document any irregularities you may detect with the voting machines—do not photograph voters.
